

Text File Challenge

Goal

Load records from the `StandardDataSet` into the users list (at least first and last name). Then create a new record and save it to the list and then the file.

Bonus

Load all columns from the `StandardDataSet` and then, without changing any code except the text file name, load the `AdvancedDataSet` and ensure the data all goes in the correct columns. Ensure saving the data correctly puts the data back in the text file in the right column order.

"Practice makes the master."
